第1章 (例題 — 同志社 政策学部レベル・5 分)

同志社政策英語は 75 分・大問 3 題。本問は長文 1 題で 25-30 分相当。

【例題】(同志社大学 政策学部 入試 典型形式・改題)

Read the passage and answer the questions that follow.

Over the past three decades, the language of "evidence-based" reform has spread from medicine, where it originated, to almost every domain in which public policy is made. Governments now routinely commission empirical studies of proposed interventions; international organizations have invested heavily in synthesizing the findings into accessible policy guides; departments of economics and public health at major universities have reoriented substantial portions of their research toward producing the kinds of estimates that policymakers can use. The promise has been straightforward: where decisions used to be made on the basis of theory, intuition, and political pressure, they will increasingly be made on the basis of evidence.

Within this broad movement, one particular technique has come to occupy a position of unusual prominence. The (A) randomized controlled trial, or RCT, was developed in medical research as a way of estimating the causal effect of an intervention without being misled by the many factors that can produce mere correlations. The basic idea is to assign participants at random to a treatment group and a control group, so that any difference in outcomes between the two groups can be attributed, with reasonable confidence, to the treatment itself rather than to pre-existing differences between the participants. The technique was extended to economics in the 1990s and has since been applied to evaluate development programmes, educational reforms, and even nudges intended to improve household financial decisions. The 2019 Nobel Prize in Economics, awarded to three of the technique's most influential practitioners, marked the arrival of the approach at the centre of professional respectability.

The enthusiasm that has accompanied this rise has not been universally shared. Critics, including some prominent economists who themselves work with RCTs in other contexts, have begun to ask whether the technique is being asked to bear more weight than its actual capabilities can support. The objection has several strands. One is that the conditions of an

RCT — a defined population, a precisely specified intervention, controlled measurement — often differ substantially from the conditions of the broader social world in which the intervention would eventually be deployed. An educational reform that produced an impressive estimated effect on a few thousand children, in a few specific schools, supervised by enthusiastic researchers, may have no comparable effect when extended to millions of children in ordinary schools whose teachers have no particular reason to share the original enthusiasm.

A second strand of objection concerns what RCTs cannot, by their structure, address. Some of the most consequential questions that policymakers face concern interventions whose effects depend on widespread adoption and on the responses of complex institutional systems — questions about the design of a tax code, about the long-term effects of a monetary regime, about the social consequences of changes in family law. These questions cannot, for either practical or ethical reasons, be settled by randomly assigning whole societies to different policies and observing what happens. To restrict policy evidence to what RCTs can produce is, the critics argue, to systematically privilege questions of a particular size and shape over questions whose importance does not happen to align with the technique's strengths.

A third strand of objection is more philosophical. The very framing of policy as an exercise in "evidence-based decision-making," critics suggest, can carry a misleading suggestion that the political dimensions of policy choice — questions about whose interests should weigh, which trade-offs are acceptable, which values matter — can be reduced to questions of empirical fact. They cannot. The evidence may tell us, with greater or lesser confidence, what a proposed intervention would do; it cannot, by itself, tell us whether what it would do is what we should want.

Defenders of the movement have offered responses that, in the more thoughtful versions, accept much of what the critics say. They argue that RCTs are best understood as one tool among several rather than as the privileged path to policy truth; that the question of external validity — whether a finding from one context transfers to another — should be addressed explicitly rather than assumed away; that the boundary between empirical and normative questions, while real, is not always as clean as either side likes to assume. The more interesting disagreements are not about whether the evidence-based movement has

produced genuine improvements (it has), but about how to integrate its contributions with the kinds of knowledge that its preferred methods cannot, in principle, provide.

What the dispute has made clearer, perhaps, is that the appeal of evidence-based policy partly reflects a desire to depoliticize what is, in the end, an irreducibly political activity. A society that wants its policies to be guided by something more than the prejudices of its current rulers will reach, naturally, for empirical methods that promise to settle disputes by appeal to facts. But facts, however carefully collected, do not by themselves choose ends. The deeper question, which the evidence-based movement has helped to bring into focus, is how a society that takes evidence seriously can also remain honest about the political character of the decisions that no quantity of evidence will ever decide for it.

Q1. According to the first paragraph, what has the promise of "evidence-based" reform been?

- ① That all policy decisions should be made by unelected experts.
- ② That decisions which used to be made on theory, intuition, and political pressure will increasingly be made on the basis of evidence.
- ③ That all economic research should be banned.
- ④ That governments should never commission empirical studies.

Q2. What is the basic logic of the randomized controlled trial (RCT), according to the second paragraph?

- ① Participants are randomly assigned to a treatment group and a control group, so that any difference in outcomes can be attributed, with reasonable confidence, to the treatment itself rather than to pre-existing differences.
- ② Participants self-select into whichever group they prefer.
- ③ Researchers observe everyone in the population at once.
- ④ Only the most enthusiastic participants are included in any study.

Q3. What is the "first strand of objection" raised by critics of RCTs, according to the third paragraph?

- ① That RCTs are too cheap to be taken seriously.
- ② That the conditions of an RCT — defined population, precise intervention, controlled measurement — often differ substantially from the broader social world, so an intervention's

impressive small-scale effect may not be reproduced when extended to ordinary settings.

- ③ That RCTs always produce false results.
- ④ That RCTs are illegal in most countries.

Q4. What is the "second strand of objection" raised in the fourth paragraph?

- ① That RCTs cannot, by their structure, address questions whose effects depend on widespread adoption and complex institutional systems — such as the design of a tax code or the long-term effects of a monetary regime — since whole societies cannot be randomly assigned to different policies.
- ② That RCTs use too many participants.
- ③ That economists are universally opposed to RCTs.
- ④ That tax codes should never be studied.

Q5. What is the "third strand of objection," which is more philosophical?

- ① That all empirical research is inherently biased.
- ② That the framing of policy as evidence-based decision-making can mislead us into thinking the political dimensions of policy choice — whose interests, which trade-offs, which values — can be reduced to questions of empirical fact, when evidence tells us what an intervention would do but not whether what it would do is what we should want.
- ③ That philosophers are unqualified to comment on policy.
- ④ That evidence is generally not collectible.

Q6. Which of the following best summarizes the author's overall conclusion?

- ① All policy should be made without any evidence.
- ② The appeal of evidence-based policy partly reflects a desire to depoliticize what is irreducibly a political activity; facts do not by themselves choose ends, and the deeper question is how a society that takes evidence seriously can also remain honest about the political character of decisions that no quantity of evidence will ever decide for it.
- ③ RCTs should be required for every government decision.
- ④ Policy has nothing to learn from medicine.

エビデンスベース政策と RCT への 3 種の批判

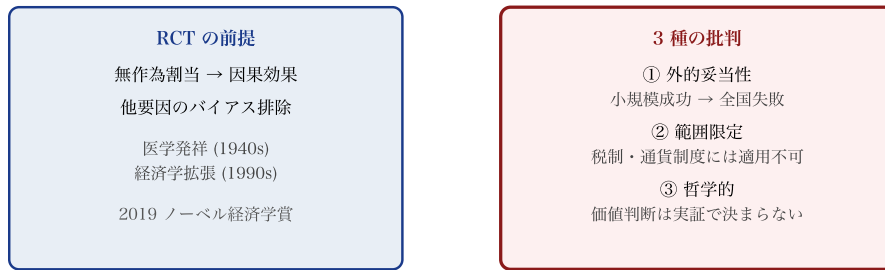

図 1-1 EBPM (Evidence-Based Policy Making) — RCT 万能論への 3 層の留保

第2章 (解法の全体方針と武器整理・3 分)

同志社政策の長文は「運動の興隆 → 中心技法 → 批判 (3 層) → 防御側の応答 → 政治的含意」の 7 段論法。

【ジャンル分析】

本文は典型的な (A) public policy methodology essay。著者は 7 段かけて、エビデンスベース政策運動の興隆と批判を整理する。(B) 同志社政策の長文は政策科学・統計哲学・政治学が交差するテーマが頻出。

【本問で必要な 4 つの武器】

- ① (A) 技法の構造 (RCT) を正確に理解
- ② (B) 3 層の批判 (外的妥当性 / 範囲限定 / 哲学的) を識別
- ③ (C) 政策科学用語の文脈推測 — "intervention" "correlation" "treatment" "external validity" "depoliticize"
- ④ (D) 著者の立場 = 慎重な統合論者と読む

【各設問の戦略】

Q1 (運動の約束) → 第 1 段 "theory, intuition, and political pressure ... evidence"

Q2 (RCT 基本論理) → 第 2 段 "random ... treatment group and control group"

Q3 (第 1 批判) → 第 3 段 "conditions of an RCT ... differ substantially from the broader social world"

Q4 (第 2 批判) → 第 4 段 "cannot, by their structure, address ... widespread adoption ... complex institutional systems"

Q5 (第 3 批判) → 第 5 段 "political dimensions of policy choice ... cannot be reduced to ... empirical fact"

Q6 (全体結論) → 最終段 "depoliticize ... irreducibly political activity"

第3章 (Q1 + Q2 — 運動 + RCT 論理・8 分)

「運動 + 中心技法」を続けて聞く。

【Q1 設問】 What has the promise of "evidence-based" reform been?

★ 第 1 段の論理

"The promise has been straightforward: (A) where decisions used to be made on the basis of theory, intuition, and political pressure, they will increasingly be made on the basis of evidence."

★ Q1 paraphrase

本文 "theory, intuition, and political pressure ... evidence"

選択肢② "decisions which used to be made on theory, intuition, and political pressure will increasingly be made on the basis of evidence"

→ 直接対応。

【Q1 正解】 ② That decisions which used to be made on theory, intuition, and political pressure will increasingly be made on the basis of evidence.

【Q2 設問】 What is the basic logic of the randomized controlled trial?

★ 第 2 段の論理

"The basic idea is to (A) assign participants at random to a treatment group and a control group, so that any difference in outcomes between the two groups can be attributed, with reasonable confidence, to the treatment itself rather than to pre-existing differences between the participants."

★ Q2 paraphrase

本文 "assign participants at random to a treatment group and a control group ... attributed ... to the treatment itself rather than to pre-existing differences"

選択肢① "Participants are randomly assigned to a treatment group and a control group, so that any difference in outcomes can be attributed, with reasonable confidence, to the treatment itself rather than to pre-existing differences"

→ 直接対応。

【Q2 正解】① Participants are randomly assigned to a treatment group and a control group, so that any difference in outcomes can be attributed, with reasonable confidence, to the treatment itself rather than to pre-existing differences.

💡 RCT は医学の標準ゴールド・スタンダード。Banerjee, Duflo, Kremer の 2019 ノーベル経済学賞は RCT を貧困削減政策評価に応用した功績。

第4章 (Q3 + Q4 — 第 1 批判 + 第 2 批判・10 分)

「外的妥当性 + 範囲限定」を続けて聞く。同志社政策の中核設問。

【Q3 設問】 What is the "first strand of objection" raised by critics of RCTs?

★ 第 3 段の論理 (外的妥当性 = external validity)

"the conditions of an RCT — a defined population, a precisely specified intervention, controlled measurement — often (A) differ substantially from the conditions of the broader social world in which the intervention would eventually be deployed."

具体例: "An educational reform that produced an impressive estimated effect on a few thousand children, in a few specific schools ... may have no comparable effect when extended to millions of children in ordinary schools whose teachers have no particular reason to share the original enthusiasm."

★ Q3 paraphrase

本文 "conditions of an RCT ... differ substantially from the broader social world ... no comparable effect when extended"

選択肢② "the conditions of an RCT — defined population, precise intervention, controlled measurement — often differ substantially from the broader social world, so an intervention's impressive small-scale effect may not be reproduced when extended to ordinary settings"
→ 直接対応。

【Q3 正解】 ② That the conditions of an RCT — defined population, precise intervention, controlled measurement — often differ substantially from the broader social world, so an intervention's impressive small-scale effect may not be reproduced when extended to ordinary settings.

【Q4 設問】 What is the "second strand of objection"?

★ 第 4 段の論理 (範囲限定)

"Some of the most consequential questions that policymakers face concern interventions whose effects (A) depend on widespread adoption and on the responses of complex institutional systems — questions about the design of a tax code, about the long-term effects

of a monetary regime, about the social consequences of changes in family law. These questions (B) cannot, for either practical or ethical reasons, be settled by randomly assigning whole societies to different policies."

★ Q4 paraphrase

本文 "widespread adoption ... complex institutional systems ... tax code, monetary regime, family law ... cannot ... be settled by randomly assigning whole societies"

選択肢① "RCTs cannot, by their structure, address questions whose effects depend on widespread adoption and complex institutional systems — such as the design of a tax code or the long-term effects of a monetary regime — since whole societies cannot be randomly assigned to different policies"

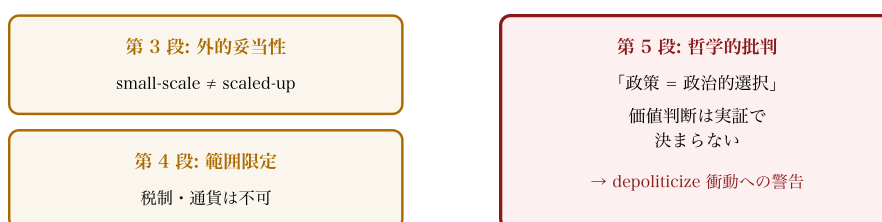

→ 直接対応 (全要素)。

【Q4 正解】① That RCTs cannot, by their structure, address questions whose effects depend on widespread adoption and complex institutional systems — such as the design of a tax code or the long-term effects of a monetary regime — since whole societies cannot be randomly assigning to different policies.

★ 重要観察 — Q3 と Q4 の連動

Q3 = 適用結果の外的妥当性 → Q4 = そもそも適用不能な問題類型。 (A) 技術的限界の二側面を順に提示する論証。

RCT の 3 層批判 — 表層から深層へ

→ 著者: 統合論 (RCT は道具の 1 つ、価値判断は別)

図 5-1 表層 (外的妥当性) から深層 (政治哲学) への批判の累進

第5章 (Q5 — 第 3 批判 (哲学的) ・ 5 分)

「最も深い批判」を読む。政策学エッセイの核心。

【設問】 What is the "third strand of objection," which is more philosophical?

★ 第 5 段の論理

"The very framing of policy as an exercise in 'evidence-based decision-making,' critics suggest, can carry a misleading suggestion that (A) the political dimensions of policy choice — questions about whose interests should weigh, which trade-offs are acceptable, which values matter — can be reduced to questions of empirical fact. They cannot."

"The evidence may tell us, with greater or lesser confidence, what a proposed intervention would do; it cannot, by itself, tell us (B) whether what it would do is what we should want."

★ paraphrase 対応

本文 "political dimensions of policy choice ... whose interests ... which trade-offs ... which values matter ... cannot be reduced to ... empirical fact ... what an intervention would do ... not whether what it would do is what we should want"

選択肢② "the framing of policy as evidence-based decision-making can mislead us into thinking the political dimensions of policy choice — whose interests, which trade-offs, which values — can be reduced to questions of empirical fact, when evidence tells us what an intervention would do but not whether what it would do is what we should want"

→ 直接対応。

★ 誤答分析

- ・ ① "all empirical research is inherently biased" → (A) 極端化。著者は実証研究を否定していない。
- ・ ③ "philosophers are unqualified" → (B) 本文に専門家批判なし。
- ・ ④ "evidence is generally not collectible" → (C) 本文に収集論なし。

【正解】 ② That the framing of policy as evidence-based decision-making can mislead us into thinking the political dimensions of policy choice — whose interests, which trade-offs, which values — can be reduced to questions of empirical fact, when evidence tells us what an intervention would do but not whether what it would do is what we should want.

💡 重要概念: "is-ought" 区別 (Hume)。事実は事実、価値は価値、両者は還元不能。Logical Positivism 批判の核心。

第6章 (Q6 — Main Idea 設問 + 関連話題・10 分)

政策エッセイの結論は「depoliticization 衝動への警告」型。

【設問】 Which of the following best summarizes the author's overall conclusion?

★ 最終段の精読

"What the dispute has made clearer, perhaps, is that (A) the appeal of evidence-based policy partly reflects a desire to depoliticize what is, in the end, an irreducibly political activity."

"But facts, however carefully collected, (B) do not by themselves choose ends. The deeper question ... is (C) how a society that takes evidence seriously can also remain honest about the political character of the decisions that no quantity of evidence will ever decide for it."

→ 主旨 3 要素:

- ①EBPM の魅力は「脱政治化」の願望
- ②事実は目的を選ばない (is-ought 区別)
- ③「実証重視 + 政治的性格の honesty」の両立が深い問い

★ 選択肢②との対応

"The appeal of evidence-based policy partly reflects a desire to depoliticize what is irreducibly a political activity; facts do not by themselves choose ends, and the deeper question is how a society that takes evidence seriously can also remain honest about the political character of decisions that no quantity of evidence will ever decide for it"

→ 3 要素すべて含む。

【正解】 ② The appeal of evidence-based policy partly reflects a desire to depoliticize what is irreducibly a political activity; facts do not by themselves choose ends, and the deeper question is how a society that takes evidence seriously can also remain honest about the political character of decisions that no quantity of evidence will ever decide for it.

★ 関連話題 — 同志社政策進学後への接続

- ・ (A) Banerjee / Duflo / Kremer — 2019 ノーベル経済学賞、Poor Economics 共著
- ・ (B) Angus Deaton — RCT 批判の代表的経済学者

第7章 (同志社政策英語 攻略のコツ・5 分)

同志社政策長文を完答するための 5 つの技術。

【コツ 1】 7 段論法 (運動 → 技法 → 3 層批判 → 防御 → 政治的含意) を予測

【コツ 2】 政策科学・統計哲学の固有名詞

- ・ (A) Banerjee / Duflo / Kremer / Deaton / Cartwright — EBPM 論争の主要論者
- ・ (B) Cochrane / What Works Centres / J-PAL — EBPM の制度的拠点
- ・ (C) Hume / Popper / Rawls — 関連する哲学者
- ・ (D) Campbell / Cronbach / Pearl — 因果推論の理論家

【コツ 3】 同志社政策頻出語の文脈推測

intervention / correlation / causal / treatment / control / external validity / generalize /
depoliticize / empirical / normative

【コツ 4】 誤答パターン 4 種 (同志社政策版)

- ・ (A) 極端化: never collected / always biased / immediately abolished / required for every decision
- ・ (B) 逆方向: evidence is irrelevant / experts always wrong
- ・ (C) 論点ずれ: 倫理問題のみ・コストのみ・国際関係
- ・ (D) 1 層批判への矮小化: cheap / illegal — 真面目な批判ではない

【コツ 5】 時間配分 (同志社政策 75 分)

長文には(A) 25-30 分を上限。

【最後にひとこと】

同志社政策の英語は(A) 語学試験であると同時に(B) 政策科学リテラシー試験。本問の EBPM 論は、入学後に学ぶ公共政策論・計量分析の核心テーマ。

第8章 (類題チャレンジ・10 分) [10 点]

本講義の手法を応用する 5 問。

(類題 1) 本文中の "external validity" の意味として最も近いものを選びなさい。

- ① ある実験結果が別の文脈にも一般化できるかという妥当性
- ② 外国大学による認定
- ③ 外部資金の調達可能性
- ④ 国際的な法的有効性

(類題 2) 本文の "depoliticize" が示唆するものとして最も適切なものを選びなさい。

- ① 本来は政治的選択である問題を、技術的・実証的問題に見せかけて政治性を覆い隠すこと
- ② 政治家を辞職させること
- ③ 国際政治から距離を置くこと
- ④ 投票率を下げること

(類題 3) 本文中で「2019 Nobel Prize in Economics」が示唆するものとして最も適切なものを選びなさい。

- ① RCT 実践者 (Banerjee, Duflo, Kremer) が学術的中心権威を得た象徴的事件
- ② RCT 技術の決定的失敗
- ③ 経済学からの RCT 排除
- ④ ノーベル賞の制度改革

(類題 4) 本文の "is what we should want" が示唆する区別として最も適切なものを選びなさい。

- ① 事実 (is) と価値 (ought) の哲学的区別 (Hume 由来)
- ② 経済成長 (is) と環境保護 (should) の対立
- ③ 私的選好 (want) と公共善 (should) の対立

- ④ 現状 (is) と理想 (should) の対立

(類題 5) 本文の論理構成として最も近いものを選びなさい。

- ① 運動の興隆 → RCT の中心化 → 第 1 批判 (外的妥当性) → 第 2 批判 (範囲限定) → 第 3 批判 (哲学的) → 防御側の応答 → depoliticize 衝動への警告
- ② 結論先出し → 根拠列挙のみ
- ③ 賛成意見の単純な列挙
- ④ 歴史的説明のみで結論なし

第9章 (まとめ・宿題・5 分)

今日の核心整理と同志社政策本番に向けた宿題

【本日の核心 5 か条】

- ① 政策エッセイは (A) 「技法の興隆 → 3 層批判 → 統合的結論」 の構成。
- ② (B) RCT (randomized controlled trial) は EBPM の中心概念。
- ③ (C) 外的妥当性 / 範囲限定 / 哲学的 の 3 層批判を識別する。
- ④ 誤答パターンは「(D) 極端化」(immediately abolished / never collected)。
- ⑤ 主旨設問は(A) 「事実 ≠ 価値、depoliticize 衝動への警告」型を選ぶ。

【宿題】

- ① 本講義の Q1-Q6 を見ないで本文だけ読み直し、自分で 6 問の設問を作成。
- ② 類題 5 問を解き直し、本文 7 段の各段にひと言タイトルを書き出す。
- ③ 過去問: 同志社大学 政策学部 英語 (過去 5 年分) から長文 1 題を選び、本日の手法で精読する。

【最後にひとこと】

同志社政策の英語は(A) 語学試験であると同時に(B) 政策科学リテラシー試験。本問の EBPM 論は、入学後に学ぶ公共政策論・計量分析の核心テーマ。
