

関西学院大学 商学部 英語 自習プリント

英語が得意な人のための「私大難関本番レベル」— AI と創造的労働の未来

2026 年 5 月 26 日

高校 3 年～既卒 (難関私大文系志望)

英語 (関西学院大学 商学部・本番水準)

Trillion 塾

第1章 (例題 — 関西学院大学レベル・5 分)

関学英語は 90 分・大問 4-5 題。本問は長文 1 題で 25 分相当。

【例題】(関西学院大学 商学部 入試 典型形式・改題)

Read the passage and answer the questions that follow.

For most of the past two centuries, predictions about the future of work in mechanized societies have followed a familiar pattern. New machines, the argument runs, will replace the most repetitive forms of physical labour, freeing human workers to take up the more creative, judgement-intensive tasks that machines cannot perform. Painful adjustments will occur, especially for workers whose skills are most directly displaced, but the long-run direction of change is upward — toward jobs that demand precisely those capacities of imagination, interpretation, and original judgement that have traditionally been thought distinctively human.

The recent emergence of generative artificial intelligence has complicated this comfortable story in ways that few of its inheritors anticipated. Systems trained on large bodies of text can now produce serviceable drafts of legal contracts, advertising copy, computer code, and short essays in styles ranging from the academic to the conversational. Systems trained on images can generate, in seconds, illustrations that would once have required a skilled artist days to complete. The work being displaced, in many of these cases, is precisely the kind of work that the older story had identified as the safe destination of the displaced: the cognitive, creative, judgement-intensive tasks of educated professionals.

Defenders of the older optimism have not been silent. They argue, with considerable force, that the systems in question remain best understood as tools that will augment rather than replace human professionals — that a junior lawyer assisted by a sophisticated drafting system will be more productive than one without it, that a graphic designer who masters new image-generation tools will produce more and better work than one who refuses to learn them. On this view, the displacement of particular tasks is not the same as the displacement of the workers who once performed them, and the historical pattern of upward mobility will reassert itself once the period of adjustment has passed.

Critics of this view note that it depends on an empirical question that the available evidence does not yet answer. If the new systems do raise the productivity of human professionals, but raise it so much that one assisted professional can do the work of five, then four of those five professionals will find themselves looking for work the systems do not yet perform — work that may exist, or may not. The historical record contains both kinds of episode: technological transitions whose displaced workers were absorbed into new and often better jobs, and transitions whose displaced workers spent decades in the lower-wage occupations that opened up to receive them. Whether the present transition resembles the first or the second cannot be determined in advance.

A further consideration concerns the distribution of the gains and losses. Even if the new productivity is large enough to support continued high employment in the affected professions, it is not automatic that the gains will be shared with the workers themselves rather than captured by the owners of the systems and the firms that deploy them. The shape of the eventual outcome depends, in significant part, on institutions — labour-market regulation, intellectual-property rules, tax policy — whose design is itself contested. To say that "the technology will work out" without specifying the institutional framework within which it will work out is to evade the question.

What seems prudent, in such a moment, is a refusal of both available simplifications. The claim that the new systems are merely tools that will eventually be absorbed without serious dislocation understates the genuine novelty of cognitive automation. The claim that they will eliminate creative professions altogether overstates a capacity that, on close inspection, still has clear limits. The more difficult truth lies between these poles, and the institutions that will determine which version of it actually obtains are precisely the institutions that the abstract debate too often passes over.

The deeper lesson, perhaps, is that the future of creative work will not be settled by the technology alone. It will be settled by the rules under which that technology is developed and deployed, by the bargains struck between workers and the firms that employ them, and by the broader public's willingness to take an interest in questions that the older story had encouraged it to ignore.

Q1. What did the familiar pattern of prediction about new machines hold, according to the first paragraph?

- ① That new machines would entirely eliminate all forms of human work.
- ② That machines would replace repetitive physical labour, freeing workers to take up creative, judgement-intensive tasks — with the long-run direction upward.
- ③ That all technological change would be smoothly painless for displaced workers.
- ④ That mechanized societies would inevitably become poorer.

Q2. Why has generative artificial intelligence "complicated" this familiar story?

- ① Because it has produced no usable outputs at all.
- ② Because the work being displaced — drafting contracts, advertising copy, code, illustrations — is precisely the cognitive, creative, judgement-intensive work that the older story had identified as the safe destination of displaced workers.
- ③ Because it has been banned in most major economies.
- ④ Because it requires more human input than previous machines.

Q3. What is the argument of the "defenders of the older optimism" cited in the third paragraph?

- ① That generative AI systems are best understood as tools that augment rather than replace human professionals, raising productivity for those who learn to use them.
- ② That all generative AI should be permanently banned.
- ③ That professionals should refuse to use any AI tools.
- ④ That technological change always harms productivity.

Q4. What empirical question do critics of the augmentation view raise?

- ① Whether AI systems can pass a written examination.
- ② Whether the productivity gain is so large that one assisted professional can do the work of five — leaving the other four to seek work that may or may not exist.
- ③ Whether AI systems are physically expensive to operate.
- ④ Whether AI systems are legal in every jurisdiction.

Q5. Why does the author argue that "to say that 'the technology will work out' without specifying the institutional framework is to evade the question"?

- ① Because new productivity gains are not automatically shared with workers; whether they are captured by system owners and deploying firms depends on labour regulation, IP rules, and tax policy whose design is contested.

- ② Because workers always benefit automatically from new technologies.
- ③ Because governments never play any role in technology adoption.
- ④ Because intellectual-property rules have been universally settled.

Q6. Which of the following best summarizes the author's overall conclusion?

- ① The new AI systems will straightforwardly eliminate all creative professions.
- ② The future of creative work will not be settled by the technology alone; it will be settled by the rules under which the technology is developed and deployed, the bargains struck between workers and firms, and the broader public's willingness to take an interest in questions that the older story encouraged it to ignore.
- ③ The familiar nineteenth-century story of upward mobility has been completely confirmed and requires no revision.
- ④ All creative professions should immediately refuse to use any AI tools.

技術と労働 — 古い物語と新しい物語

図 1-1 200 年の労働物語 — AI が「安全圏」とされた creative work を直撃

第2章 (解法の全体方針と武器整理・3 分)

関学商の長文は「通説 → 反証 → 楽観派の応答 → 批判 → 制度の重要性 → 中道 → 政治的含意」の 7 段論法。

【ジャンル分析】

本文は典型的な (A) labor-economy + technology essay。著者は 7 段かけて、AI と労働の関係を「楽観 vs 悲観 vs 制度論」の三項で整理する。

【本問に必要な 4 つの武器】

- ① (A) 200 年の労働物語 の文脈把握
- ② (B) 楽観派 vs 批判派 の往復
- ③ (C) 制度論への着地 — 「技術の結果は institution が決める」
- ④ (D) 著者の立場 = 両極批判 + 制度論支持 と読む

【各設問の戦略】

Q1 (familiar pattern) → 第 1 段 "freeing human workers ... upward"

Q2 (AI が complicated) → 第 2 段 "precisely ... the safe destination"

Q3 (楽観派の応答) → 第 3 段 "augment rather than replace"

Q4 (批判の論理) → 第 4 段 "one assisted professional can do the work of five"

Q5 (institutional framework) → 第 5 段 "labour regulation, IP rules, tax policy"

Q6 (全体結論) → 最終段 "rules under which that technology is developed and deployed"

第3章 (Q1 + Q2 — familiar pattern + AI の衝撃・8 分)

「歴史的物語 + 現代の反証」を続けて聞く。

【Q1 設問】 What did the familiar pattern of prediction hold?

★ 第 1 段の論理

"New machines ... will replace the most repetitive forms of physical labour, freeing human workers to take up (A) the more creative, judgement-intensive tasks that machines cannot perform. ... the long-run direction of change is (B) upward"

★ Q1 paraphrase

本文 "replace ... physical labour ... freeing ... creative, judgement-intensive tasks ... upward"
選択肢② "machines would replace repetitive physical labour, freeing workers to take up creative, judgement-intensive tasks — with the long-run direction upward"
→ 直接対応。

【Q1 正解】 ② That machines would replace repetitive physical labour, freeing workers to take up creative, judgement-intensive tasks — with the long-run direction upward.

【Q2 設問】 Why has generative AI "complicated" this story?

★ 第 2 段の論理

"The work being displaced, in many of these cases, is (A) precisely the kind of work that the older story had identified as the safe destination of the displaced: the cognitive, creative, judgement-intensive tasks of educated professionals."

★ Q2 paraphrase

本文 "precisely the kind ... safe destination ... cognitive, creative, judgement-intensive tasks"
選択肢② "the work being displaced — drafting contracts, advertising copy, code, illustrations — is precisely the cognitive, creative, judgement-intensive work that the older story had identified as the safe destination of displaced workers"
→ 直接対応。

【Q2 正解】② Because the work being displaced — drafting contracts, advertising copy, code, illustrations — is precisely the cognitive, creative, judgement-intensive work that the older story had identified as the safe destination of displaced workers.

第4章 (Q3 + Q4 — 楽観派 vs 批判派・10 分)

「augmentation vs displacement」の論争を続けて聞く。

【Q3 設問】 What is the argument of the "defenders of the older optimism"?

★ 第 3 段の論理

"the systems in question remain best understood as (A) tools that will augment rather than replace human professionals — that a junior lawyer assisted by a sophisticated drafting system will be more productive than one without it"

★ Q3 paraphrase

本文 "tools that will augment rather than replace ... more productive"

選択肢① "generative AI systems are best understood as tools that augment rather than replace human professionals, raising productivity for those who learn to use them"

→ 直接対応。

【Q3 正解】 ① That generative AI systems are best understood as tools that augment rather than replace human professionals, raising productivity for those who learn to use them.

【Q4 設問】 What empirical question do critics of the augmentation view raise?

★ 第 4 段の論理

"If the new systems do raise the productivity of human professionals, but raise it so much that (A) one assisted professional can do the work of five, then (B) four of those five professionals will find themselves looking for work the systems do not yet perform — work that may exist, or may not."

★ Q4 paraphrase

本文 "one assisted professional can do the work of five ... four ... looking for work ... may exist, or may not"

選択肢② "the productivity gain is so large that one assisted professional can do the work of five — leaving the other four to seek work that may or may not exist"

→ 直接対応。

【Q4 正解】② Whether the productivity gain is so large that one assisted professional can do the work of five — leaving the other four to seek work that may or may not exist.

★ 重要観察 — Q3 と Q4 の連動

Q3 = 楽観派の論理 (augmentation) → Q4 = その盲点 (productivity 過剰)。(A) 「同じ事実から正反対の結論」が技術倫理エッセイの典型構造。

技術と労働 — 同じ事実、正反対の結論

図 5-1 augmentation vs displacement の論争 — productivity 上昇の解釈が分かれる

第5章 (Q5 — 制度の重要性・5 分)

「技術論を超えて制度論へ」の転換を読む。関学商の中核。

【設問】 Why does the author argue that "to say that 'the technology will work out' without specifying the institutional framework is to evade the question"?

★ 第 5 段の論理

"Even if the new productivity is large enough to support continued high employment in the affected professions, it is not automatic that (A) the gains will be shared with the workers themselves rather than captured by the owners of the systems and the firms that deploy them. The shape of the eventual outcome depends, in significant part, on institutions — (B) labour-market regulation, intellectual-property rules, tax policy — whose design is itself contested."

★ paraphrase 対応

本文 "gains ... captured by the owners ... depends on institutions — labour-market regulation, intellectual-property rules, tax policy"

選択肢① "new productivity gains are not automatically shared with workers; whether they are captured by system owners and deploying firms depends on labour regulation, IP rules, and tax policy whose design is contested"

→ 直接対応 (3 つの institution が完全一致)。

★ 誤答分析

- ・ ② "workers always benefit automatically" → 本文と (A) 正反対。
- ・ ③ "governments never play any role" → 本文と (B) 逆方向。
- ・ ④ "IP rules have been universally settled" → 本文と (C) 逆。"itself contested" と明示。

【正解】 ① Because new productivity gains are not automatically shared with workers; whether they are captured by system owners and deploying firms depends on labour regulation, IP rules, and tax policy whose design is contested.

💡 商学頻出論点: 技術が誰に benefit するかは技術自体で決まらず、institutional framework (規制 / IP / 税制) で決まる。これが「経済学 + 政治学」の交差点。

第6章 (Q6 — Main Idea 設問 + 関連話題・10 分)

労働技術エッセイの結論は「制度的決定」型。

【設問】 Which of the following best summarizes the author's overall conclusion?

★ 最終段の精読

"The deeper lesson, perhaps, is that (A) the future of creative work will not be settled by the technology alone. It will be settled by (B) the rules under which that technology is developed and deployed, by the bargains struck between workers and the firms that employ them, and by the broader public's willingness to take an interest in questions that the older story had encouraged it to ignore."

→ 主旨 3 要素:

- ①技術単独では決まらない
- ②規則 + 労使バーゲン + 公的関心の組み合わせで決まる
- ③古い物語は公衆の関心を「不要」と感じさせた、それを見直す

★ 選択肢②との対応

"The future of creative work will not be settled by the technology alone; it will be settled by the rules under which the technology is developed and deployed, the bargains struck between workers and firms, and the broader public's willingness to take an interest in questions that the older story encouraged it to ignore."

→ 3 要素すべて含む。

【正解】 ② The future of creative work will not be settled by the technology alone; it will be settled by the rules under which the technology is developed and deployed, the bargains struck between workers and firms, and the broader public's willingness to take an interest in questions that the older story encouraged it to ignore.

★ 関連話題 — 関学商進学後への接続

- ・ (A) Daron Acemoglu / Pascual Restrepo — 自動化と労働の経済学
- ・ (B) Erik Brynjolfsson / Andrew McAfee "Second Machine Age" (2014)

- ・ (D) John Maynard Keynes "Economic Possibilities for Our Grandchildren" (1930) — 技術的

失業の古典

- ・ (A) 2023 米国 SAG-AFTRA ストライキ / 全米脚本家組合スト — AI 時代の労使紛争の象徴

第7章 (関学商英語 攻略のコツ・5 分)

関学商長文を完答するための 5 つの技術。

【コツ 1】 7 段論法 (通説 → 反証 → 楽観 → 批判 → 制度論 → 中道 → 政治的含意) を予測

【コツ 2】 技術と労働の固有名詞

- ・ (A) Keynes / Acemoglu / Brynjolfsson / Frey & Osborne — 技術的失業論
- ・ (B) ChatGPT / GitHub Copilot / Midjourney / DALL-E — 現代の generative AI
- ・ (C) SAG-AFTRA / Writers Guild of America — AI 時代の労組

【コツ 3】 関学商頻出語の文脈推測

generative / augment / displace / repetitive / judgement-intensive / institutional framework /
IP rules / dislocation / bargain / settle

【コツ 4】 誤答パターン 4 種 (関学商版)

- ・ (A) 極端化: entirely eliminate / completely confirmed / immediately refuse
- ・ (B) 行動指針: should be banned / should refuse — 著者は分析者
- ・ (C) 論点ずれ: 物理的コスト・国際法 — 本文の関心外
- ・ (D) 逆方向: 楽観派と悲観派を取り違える

【コツ 5】 時間配分 (関学 90 分)

長文には(A) 25 分を上限。他の大問に時間を残す。

【最後にひとこと】

関学商の英語は(A) 語学試験であると同時に(B) 技術経済リテラシー試験。本問の AI 労働論は、
入学後に学ぶ労働経済学・産業組織論の核心テーマ。

第8章 (類題チャレンジ・10 分) [10 点]

本講義の手法を応用する 5 問。

(類題 1) 本文中の "augment" の意味として最も近いものを選びなさい。

- ① 増強する・補完する
- ② 削除する
- ③ 禁止する
- ④ 翻訳する

(類題 2) 本文の "safe destination of the displaced" が示唆するものとして最も適切なものを選びなさい。

- ① 置換された労働者が次に就くべき安全な職
- ② 工場の物理的避難所
- ③ 国際的な労働者支援センター
- ④ 退職金制度

(類題 3) 本文中で「one assisted professional can do the work of five」が示唆するものとして最も適切なものを選びなさい。

- ① augment が strong すぎると displacement に転化する境界線
- ② 5 倍の賃金を払うべきという主張
- ③ AI が完全に人間を超えた証拠
- ④ 5 人体制のチームの理想形

(類題 4) 本文の "intellectual-property rules" が示唆する institution として最も適切なものを選びなさい。

- ① AI 生成物の著作権・特許など、技術の生み出す価値の分配を決める法的枠組み
- ② 大学の知的財産権ポリシーのみ
- ③ 学術論文の盗用防止規則

④ 国際的な特許出願手続き

(類題 5) 本文の論理構成として最も近いものを選びなさい。

① familiar pattern 提示 → AI の反証 → 楽観派の応答 → 批判 → 制度論への着地 → 両極批判 → 政治的含意

② 結論先出し → 根拠列挙のみ

③ 賛成意見の単純な列挙

④ 歴史的説明のみで結論なし

第9章 (まとめ・宿題・5 分)

今日の核心整理と関学商本番に向けた宿題

【本日の核心 5 か条】

- ① 技術労働エッセイは (A) 「楽観 vs 悲観 vs 制度論」 の三項構造。
- ② (B) augmentation vs displacement は同じ事実から正反対の結論を導く。
- ③ (C) institutional framework (規制・IP・税制) が技術の分配を決める。
- ④ 修辞設問は「(D) productivity 過剰の境界」(one does work of five) を聞く。
- ⑤ 主旨設問は(A) 「技術 + 規則 + バーゲン + 公的関心」 の組み合わせ型を選ぶ。

【宿題】

- ① 本講義の Q1-Q6 を見ないで本文だけ読み直し、自分で 6 問の設問を作成。
- ② 類題 5 問を解き直し、本文 7 段の各段にひと言タイトルを書き出す。
- ③ 過去問: 関西学院大学 商学部 英語 (過去 5 年分) から長文 1 題を選び、本日の手法で精読する。

【最後にひとこと】

関学商の英語は(A) 語学試験であると同時に(B) 技術経済リテラシー試験。本問の AI 労働論は、入学後に学ぶ労働経済学・産業組織論の核心テーマ。
