高校 3 年～既卒 (難関私大文系志望)

英語 (早稲田 商学部・本番水準)

Trillion 塾

## 第1章 (例題 — 早稲田大学 商学部レベル・5 分)

本番では 90 分で大問 5 題。本問は長文読解 1 題で 25-30 分相当 (商学部の最大配点ブロック)。

【例題】(早稲田大学 商学部 入試 典型形式・改題)

Read the passage and answer the questions that follow.

When the first reviews appeared on a small online bookstore in the late 1990s, they were widely greeted as a small revolution in consumer empowerment. For the first time, ordinary shoppers could see what other ordinary shoppers had thought of a product before deciding whether to buy it. The traditional information asymmetry between sellers, who knew everything about what they were offering, and buyers, who knew nothing until the package arrived, seemed at last to have been narrowed. Stars and short paragraphs, contributed by strangers with nothing visibly to gain, became one of the most influential signals in the consumer economy.

Two decades later, the picture is considerably more complicated. Reviews remain influential — recent surveys suggest that more than ninety per cent of online shoppers consult them before any purchase of consequence — but the assumption that they offer a straightforward window onto disinterested experience has become hard to defend. In many product categories, a parallel industry has emerged whose entire purpose is to manufacture the appearance of consumer enthusiasm: services that supply thousands of glowing reviews for a modest fee, freelance writers paid in cash or merchandise to praise particular brands, and software systems that detect and amplify the most flattering testimonials while quietly suppressing the rest. The reviews still look like the voice of the crowd. Behind that voice, however, is often a carefully arranged microphone.

The platforms on which these reviews appear have responded with elaborate countermeasures. Sophisticated algorithms now flag suspicious patterns: identical sentences appearing across different accounts, clusters of reviews posted within minutes of one another, evaluations whose tone diverges sharply from what genuine purchasers tend to write. Some platforms have invested heavily in identifying and removing reviews believed to be fake, and several have publicized their efforts as a sign of their commitment to consumer trust. Yet the same platforms have a more delicate problem to manage: their own business

models depend on a steady volume of positive reviews to keep listings attractive. A merchant whose products receive too many honest complaints may, after all, abandon the platform altogether, taking commissions with him.

The result is a structural ambivalence. The platforms have strong reasons to police fraud, and equally strong reasons not to police too aggressively. Independent investigations have documented cases in which obviously manipulated reviews remained online for months after they had been reported, while honest negative reviews were sometimes removed on the dubious ground that they violated obscure rules of community conduct. The picture that emerges is not one of straightforward villainy but of a system whose various incentives are quietly misaligned with the consumer interest that the system was originally built to serve.

Behavioral research suggests that consumers, even when warned, struggle to discount the influence of manipulated reviews. A product with a four-and-a-half-star average remains more attractive than its three-star competitor, even to shoppers who have just been told that some fraction of those stars are likely to have been bought. The cognitive effort required to second-guess every cluster of testimonials is, for most people on most days, simply not worth the saving. Trust, once placed in a system, tends to persist in the absence of any obvious alternative.

A more promising direction may lie not in better fraud detection alone but in a deeper rethinking of how trust is constructed online. Some new platforms have begun to require verified purchase as a condition of reviewing. Others give greater weight to long-standing reviewers with consistent track records, or to reviewers whose evaluations have repeatedly correlated with later customer satisfaction. None of these solutions is complete, but each acknowledges a lesson the early enthusiasts of the review economy did not fully appreciate: that a crowd of strangers can be a powerful source of information, but only if the social architecture that gathers them rewards honesty more reliably than it rewards noise.

---

Q1. According to the first paragraph, why were online reviews originally welcomed?

- ① They reduced the shipping costs of online purchases.
- ② They lowered the information asymmetry between sellers and buyers.
- ③ They allowed governments to monitor commerce more effectively.
- ④ They generated additional advertising revenue for bookstores.

Q2. What is the central problem identified in the second paragraph?

- ① That writing reviews has become a recognized literary art form.
- ② That an industry has emerged whose purpose is to manufacture fake or paid reviews disguised as genuine consumer voices.
- ③ That online shoppers have largely stopped reading reviews before purchasing.
- ④ That major platforms have officially abandoned the use of consumer reviews altogether.

Q3. According to the third paragraph, why do major platforms face a "structural ambivalence" about policing fake reviews?

- ① Their algorithms are technically too primitive to detect any manipulation.
- ② Removing too many positive reviews could deter merchants from staying on the platform, threatening their own commission revenue.
- ③ National regulators forbid them from removing any user-generated content.
- ④ Their users prefer reading fake reviews to genuine ones.

Q4. What does the behavioral research described in the fifth paragraph suggest about consumers?

- ① That consumers easily discount manipulated reviews once they have been warned about them.
- ② That consumers, despite warnings, continue to be influenced by inflated ratings because second-guessing every review is too cognitively costly.
- ③ That consumers consistently prefer products with low average ratings to those with high ones.
- ④ That consumers refuse on principle to buy from platforms that have ever hosted any fake review.

Q5. Why does the author mention platforms that require verified purchase or that weight long-standing reviewers more heavily?

- ① To argue that all platforms have already solved the problem of fake reviews.
- ② To suggest that no improvement to existing platforms is technically possible.
- ③ As examples of attempts to redesign the social architecture of online trust, going beyond mere fraud detection.
- ④ To recommend that consumers boycott platforms that lack such features.

Q6. Which of the following best summarizes the author's overall conclusion?

- ① Online reviews have lost all useful function and should be abandoned by consumers and

platforms alike.

② A crowd of strangers can be a valuable source of information, but only under social architectures that reliably reward honesty over noise.

③ Government regulation should immediately replace all platform self-policing efforts.

④ Consumers should rely solely on traditional advertising rather than any form of peer review.

図 1-1 レビュー経済の 3 主体と incentive misalignment — 商学部の中核論点

## 第2章 (解法の全体方針と武器整理・3分)

商学部の高文は「市場の理想 → 現実の歪み → 構造分析 → 制度提案」の典型 4 段論法。本問もその枠組みで読む。

### 【ジャンル分析】

本文は典型的な (A) business-economy essay (ビジネス経済論)。著者は 6 段かけて「オンラインレビュー」を 90 年代の理想と現代の現実から論じ、最終的に「social architecture の再設計」という制度提案を提示する。(B) 商学部の高文は「理想 → 現実 → 構造 → 提案」の 4 段論法が典型。

### 【本問で必要な 4 つの武器】

- ① (A) 時系列の流れを追う — "the late 1990s / Two decades later" 等の時間表現で段の役割を識別
- ② (B) incentive 構造の読み解き — 商学部頻出。誰がどんな利益を求めるかで論理が決まる
- ③ (C) business 用語の文脈推測 — "information asymmetry" "structural ambivalence" "misaligned" "verified purchase" 等
- ④ (D) 著者の立場 = 中立的分析者 + 制度提案者と読む (商学エッセイは「現状分析 → 制度設計の提案」が王道)

### 【各設問の戦略 — 段との対応】

- Q1 (歴史的背景) → 第 1 段 "information asymmetry" を抽出 (15 秒)
- Q2 (中核問題) → 第 2 段 "manufacture the appearance of consumer enthusiasm" を圧縮
- Q3 (構造的アンビバレンス) → 第 3 段 "business models depend on ... positive reviews" を paraphrase
- Q4 (行動経済学的知見) → 第 5 段 "cognitive effort ... not worth the saving" を圧縮
- Q5 (修辞設問・新世代プラットフォーム) → 第 6 段 "deeper rethinking of how trust is constructed"
- Q6 (全体結論) → 最終段 "only if the social architecture ... rewards honesty more reliably than ... noise"

### 【著者の立場 — 商学エッセイの王道】

商学部入試の論説は (A) 「市場の理想を提示 → 現実の歪みを暴く → 構造的原因を分析 → 制度設計を提案」 の 4 段論法。本問の著者も：

- ・ (a) 理想: information asymmetry の縮小 (90 年代の希望)

- ・ (b) 現実: 偽レビュー産業の出現
- ・ (c) 構造分析: プラットフォームの incentive misalignment
- ・ (d) 提案: verified purchase + 信頼の social architecture 再設計

→ この構造を(B) 第 1-2 段の対比 (late 1990s vs Two decades later) で予測できれば、Q6 (主旨) は最終段だけで解ける。

### 第3章 (Q1 — Information Asymmetry 設問・3 分)

商学部 Q1 は「経済学の基本概念」を聞くウォーミングアップ。15 秒で解け。

【設問】 Why were online reviews originally welcomed?

★ Step 1: 該当段 (第 1 段) を特定

設問語 "originally welcomed" は第 1 段に明示:

"When the first reviews appeared on a small online bookstore in the late 1990s, they were (A) widely greeted as a small revolution in consumer empowerment."

★ Step 2: 歓迎された理由を抽出

"The traditional (A) information asymmetry between sellers, who knew everything about what they were offering, and buyers, who knew nothing until the package arrived, seemed at last to have been (B) narrowed."

→ 売り手と買い手の情報の非対称性 (information asymmetry) が縮小した、というのが歓迎の理由。

★ Step 3: paraphrase 対応

本文 "information asymmetry ... seemed at last to have been narrowed"  
選択肢② "lowered the information asymmetry between sellers and buyers"

→ "information asymmetry" 直接一致、"narrowed" → "lowered" の同義置換。

★ Step 4: 誤答分析

- ・ ① "reduced the shipping costs" → (A) 本文に shipping cost の言及なし。 論点ずれ。
- ・ ③ "governments to monitor commerce" → (B) 本文に政府監視の言及なし。 誤連想。
- ・ ④ "advertising revenue for bookstores" → (C) 本文に広告収入の言及なし。 誤連想。

【正解】 ② They lowered the information asymmetry between sellers and buyers.

💡 商学部の経済学基礎用語: information asymmetry は George Akerlof のノーベル経済学賞論文 (Lemons 問題, 1970) で確立した概念。商学部受験生は absolutely 知っておきたい用語。

## 第4章 (Q2 — Fake Review Industry 設問・5 分)

「現実の歪み」を聞く設問。第 2 段の {下線A:Two decades later} が決定打。

【設問】 What is the central problem identified in the second paragraph?

★ Step 1: 該当段 (第 2 段) を特定

設問語 "second paragraph" 指定。第 2 段冒頭の対比:

"Two decades later, the picture is considerably more complicated."

→ 90 年代の理想 (第 1 段) から 20 年後の現実 (第 2 段) への(A) 時間的対比。

★ Step 2: 中核問題を抽出

"In many product categories, a (A) parallel industry has emerged whose entire purpose is to (B) manufacture the appearance of consumer enthusiasm: services that supply thousands of glowing reviews for a modest fee, freelance writers paid in cash or merchandise to praise particular brands, and software systems that detect and amplify the most flattering testimonials while quietly suppressing the rest."

→ 中核問題 = 「消費者の熱狂の見かけを製造する」産業の出現。具体的に 3 つの形態を列挙。

★ Step 3: 最終文の比喩

第 2 段末: "The reviews still look like the voice of the crowd. Behind that voice, however, is often a (A) carefully arranged microphone."

→ 「群衆の声」に見えて「実は注意深く配置されたマイク」 (= 偽装された商業的声) という秀逸な比喩。

★ Step 4: paraphrase 対応

本文 "parallel industry ... manufacture the appearance of consumer enthusiasm"  
選択肢② "an industry has emerged whose purpose is to manufacture fake or paid reviews disguised as genuine consumer voices"

→ "parallel industry has emerged" 直接一致、"manufacture the appearance" → "manufacture ... disguised as genuine voices"。

★ Step 5: 誤答分析

- ・① "literary art form" → (A) 本文に文学的価値の言及なし。誤連想。
- ・③ "shoppers have largely stopped reading reviews" → 本文と (B) 逆方向。90% 以上が consult する。
- ・④ "platforms have officially abandoned the use of reviews" → (C) 本文に逆。プラットフォームは依然レビューを使用。

【正解】② That an industry has emerged whose purpose is to manufacture fake or paid reviews disguised as genuine consumer voices.

💡 商学エッセイの「現実の歪み」段落は (A) 具体的な業態リスト が来る。本問の「services / freelance writers / software systems」のような列挙は中核問題の証拠。

## 第5章 (Q3 + Q4 — Structural Ambivalence + 行動経済学・10 分)

「incentive 構造」と「消費者心理」を続けて聞く商学部の中核ブロック。

【Q3 設問】 Why do major platforms face a "structural ambivalence" about policing fake reviews?

★ 該当段 (第 3-4 段) の構造

第 3 段は(A) プラットフォームの矛盾を明示する段落:

- ・前半 (取り締まりの努力): "Sophisticated algorithms now flag suspicious patterns ... Some platforms have invested heavily in identifying and removing reviews believed to be fake"
- ・後半 (取り締まりの限界): "Yet the same platforms have a more delicate problem to manage: their own (A) business models depend on a steady volume of positive reviews to keep listings attractive. A merchant whose products receive too many honest complaints may, after all, (B) abandon the platform altogether, taking commissions with him."

→ プラットフォームは fraud を取り締まる動機 (消費者信頼) と取り締まらない動機 (手数料収入) を同時に持つ。

★ Q3 の paraphrase 対応

本文 "business models depend on a steady volume of positive reviews ... A merchant ... may abandon the platform altogether, taking commissions with him"

選択肢② "Removing too many positive reviews could deter merchants from staying on the platform, threatening their own commission revenue"

→ "abandon the platform" → "deter merchants from staying"、"taking commissions with him" → "threatening their own commission revenue" と完全対応。

【Q3 正解】 ② Removing too many positive reviews could deter merchants from staying on the platform, threatening their own commission revenue.

★ Q3 誤答の罠

・① "algorithms ... technically too primitive" → 本文と (A) 逆方向。"Sophisticated algorithms" と本文は明示。

- ・③ "regulators forbid them" → (B) 本文に規制機関の言及なし。 論点ずれ。
  - ・④ "users prefer reading fake reviews" → (C) 本文に消費者選好の話なし。 誤連想。
- 

【Q4 設問】 What does the behavioral research described in the fifth paragraph suggest about consumers?

★ 該当段 (第 5 段) の構造

第 5 段は(A) 消費者心理を扱う段落:

"Behavioral research suggests that consumers, even when warned, struggle to discount the influence of manipulated reviews. A product with a four-and-a-half-star average remains more attractive than its three-star competitor, even to shoppers who have just been told that some fraction of those stars are likely to have been bought. The (A) cognitive effort required to second-guess every cluster of testimonials is, for most people on most days, (B) simply not worth the saving."

→ 行動経済学的知見 = (i) 警告されても消費者は影響を受け続ける (ii) 1 つ 1 つ疑う認知コストが高すぎて引き合わない。

★ Q4 の paraphrase 対応

本文 "even when warned, struggle to discount ... cognitive effort ... not worth the saving"  
選択肢② "despite warnings, continue to be influenced by inflated ratings because second-guessing every review is too cognitively costly"

→ "even when warned" → "despite warnings"、"cognitive effort" → "cognitively costly"、"second-guess every cluster" → "second-guessing every review" と完全対応。

【Q4 正解】 ② That consumers, despite warnings, continue to be influenced by inflated ratings because second-guessing every review is too cognitively costly.

★ Q4 誤答の罠

- ・① "easily discount" → 本文と(A) 逆方向。 "struggle to discount" と明示。
- ・③ "prefer products with low average ratings" → (B) 本文と逆。 four-and-a-half-star > three-star。
- ・④ "refuse ... ever hosted any fake review" → (C) 極端化。 本文に消費者の boycott 行動は言及なし。

## ★ 重要観察 — Q3 と Q4 の連動

Q3 = プラットフォーム側の incentive 構造 → Q4 = 消費者側の認知バイアス。 (A) 供給側と需要側の両方の失敗を続けて聞いている。両者が組み合わさることで「fake review が市場から退場しない」というメカニズムが完成する。これが商学部の (B) 「市場の失敗 (market failure) の構造分析」 の典型設問配置。

### 市場の失敗の 2 面 — 供給側 (Q3) + 需要側 (Q4)

2 面が組み合わさり「fake review 市場」が均衡解として持続

図 5-1 商学部の市場分析 — 供給側 incentive と需要側 bias の両輪が必要

## 第6章 (Q5 — Why does the author mention X? 設問・5 分)

「新世代プラットフォームの例示目的」を聞く設問。第 6 段の {下線A:deeper rethinking} が決定打。

【設問】 Why does the author mention platforms that require verified purchase or that weight long-standing reviewers more heavily?

### ★ Step 1: 修辞設問の解法フレーム

"Why does the author mention X?" → X 自身の特徴ではなく X を引用した目的を答える。X の直前 1-2 文に主張があり、X はその例証。

### ★ Step 2: 第 6 段の構造を確認

第 6 段冒頭: "A more promising direction may lie (A) not in better fraud detection alone but in a deeper rethinking of how trust is constructed online."

→ 主張 = 「fraud 検出の強化だけでなく、信頼の構築方法そのものの再考」。

"Some new platforms have begun to (B) require verified purchase as a condition of reviewing. Others give greater weight to long-standing reviewers with consistent track records, or to reviewers whose evaluations have repeatedly correlated with later customer satisfaction."

→ ここで verified purchase / 長期レビュアー重み付け / 予測精度の高いレビュアー重み付けの 3 例。

→ これらは (A) 「信頼構築の社会的アーキテクチャを再設計する試み」の具体例として機能。

### ★ Step 3: 段末の主旨

"None of these solutions is complete, but each acknowledges a lesson the early enthusiasts of the review economy did not fully appreciate: that a crowd of strangers can be a powerful source of information, but only if the (A) social architecture that gathers them rewards honesty more reliably than it rewards noise."

→ 「social architecture」が結論キーワード。verified purchase 等は social architecture 再設計の試み。

### ★ Step 4: paraphrase 対応

本文 "deeper rethinking of how trust is constructed online ... social architecture that gathers them rewards honesty"

選択肢③ "attempts to redesign the social architecture of online trust, going beyond mere fraud detection"

→ "deeper rethinking ... trust" → "redesign the social architecture ... trust"、"not in better fraud detection alone" → "going beyond mere fraud detection" と完全対応。

★ Step 5: 誤答分析 (修辞設問の典型的罣)

・① "all platforms have already solved" → (A) 言い過ぎ。本文 "None of these solutions is complete" と矛盾。

・② "no improvement is technically possible" → 本文と (B) 逆方向。著者は新世代プラットフォームを肯定的に紹介。

・④ "recommend that consumers boycott" → (C) 本文に行動指針なし。著者は分析者であり活動家ではない。

【正解】③ As examples of attempts to redesign the social architecture of online trust, going beyond mere fraud detection.

💡 商学エッセイの修辞設問は「制度設計の例示」を聞くのが定番。X の前段にある主張 ("deeper rethinking" など抽象的なフレーズ) を必ず先に押さえる。

## 第7章 (Q6 — Main Idea 設問 + 関連話題・10 分)

「英語が得意な人」はここで差をつける。商学エッセイの結論は「条件付き肯定」型。

【設問】 Which of the following best summarizes the author's overall conclusion?

### ★ Step 1: 主旨設問の解法フレーム (商学版)

商学エッセイの結論はほぼ常に:

- (a) 制度の価値を全否定しない (本問では「レビュー経済の有用性」)
- (b) 条件を明示する (本問では「social architecture の質次第」)
- (c) 制度設計を提案する (本問では「honesty を reward する」)

→ 本問もこの 3 要素を選択肢で探す。

### ★ Step 2: 最終文を精読

"a crowd of strangers (A) can be a powerful source of information, but (B) only if the social architecture that gathers them rewards honesty more reliably than it rewards noise."

→ 主旨 2 要素:

1. (A) 見知らぬ群衆は強力な情報源たりうる (肯定)
2. (B) ただし social architecture が honesty を確実に報いる場合のみ (条件)

この「肯定 + 条件」が商学エッセイの結論の typical 形。

### ★ Step 3: 選択肢②との対応

"A crowd of strangers can be a valuable source of information, but only under social architectures that reliably reward honesty over noise."

対応関係:

- "crowd of strangers can be a powerful source of information" → "crowd of strangers can be a valuable source of information"
- "only if the social architecture ... rewards honesty more reliably than ... noise" → "only under social architectures that reliably reward honesty over noise"

→ 最終文がほぼ機械的に選択肢②に翻訳されている。

【Q6 正解】② A crowd of strangers can be a valuable source of information, but only under social architectures that reliably reward honesty over noise.

★ 誤答分析 (上級者用)

- ・① "lost all useful function and should be abandoned" → (A) 言い過ぎ。著者は条件付きで肯定。
- ・③ "government regulation should immediately replace all platform self-policing" → (B) 本文に政府規制の言及なし。論点ずれ。
- ・④ "rely solely on traditional advertising" → (C) 本文に広告依存の提案なし。逆方向 (広告は本文の関心外)。

★ 関連話題 — 商学部進学後への接続

本文のテーマ「オンラインレビューと信頼」は商学部で学ぶ (A) マーケティング・情報経済学・行動経済学・組織論 の交差点:

- ・(B) George Akerlof "The Market for Lemons" (1970, ノーベル経済学賞) — information asymmetry の古典理論
- ・(C) Richard Thaler / Cass Sunstein "Nudge" (2008) — 行動経済学的アーキテクチャ設計
- ・(D) Daniel Kahneman "Thinking, Fast and Slow" — 本問 Q4 の認知バイアスの理論的基礎
- ・(A) Geoffrey Parker "Platform Revolution" — プラットフォーム経済学
- ・(B) Tim O'Reilly "WTF? What's the Future" — デジタル経済の制度設計論

→ 本文は実質的にこれらの理論を「レビュー」という具体的市場で統合した内容。商学部で学ぶ「市場設計 (market design)」の中核。

★ 商学部の入試がこのテーマを選ぶ理由

- ・商学の核心 = (A) 市場の失敗を制度設計で修復する営み
- ・本問は「information asymmetry の縮小 → 新しい失敗 → 制度的解決」という商学的問題設定の典型
- ・「正解の単純さ」ではなく「incentive 構造を読み解く力」を試している

★ 大学進学後への接続

1 年次: 経営学原論・経済学原論・統計学

2-3 年次: マーケティング・ゼミ / 情報経済学ゼミ / 行動経済学ゼミ

卒論候補: Yelp のレビュー操作と地域経済 / Amazon の verified purchase 制度の効果分析 / 食  
ベログ評価アルゴリズムと飲食店経営

## 第8章 (商学部英語 攻略のコツ・5 分)

得意な人だからこそ落とせない。商学部長文を完答するための 5 つの技術。

【コツ 1】 4 段論法 (理想 → 現実 → 構造 → 提案) を予測する

商学エッセイは 8 割がこの構成。第 1 段で理想 (本問は「information asymmetry 解消」) を読んだら、(A) 「現実とは逆 → 構造的な原因はこれ → 制度設計の提案」と予測しながら読む。これで Q6 (主旨) は本文後半でほぼ確定する。

【コツ 2】 商学用語 × discourse marker を覚える

- ・ (A) Two decades later / However / Yet — 理想から現実への対比 (本問第 2-3 段)
- ・ (B) business models depend on / structural ambivalence / misaligned — incentive 構造の合図 (本問第 3-4 段)
- ・ (C) Behavioral research suggests / cognitive effort — 行動経済学的知見の合図 (本問第 5 段)
- ・ (D) A more promising direction / deeper rethinking / social architecture — 制度提案の合図 (本問第 6 段)

【コツ 3】 経済学基礎用語の優先暗記 (商学部頻出 12 語)

商学エッセイで頻出する経済学基礎用語:

information asymmetry (情報の非対称性)、incentive (誘因)、business model (収益構造)、commission (手数料)、misaligned (整合性のない)、verified purchase (購入認証)、cognitive bias (認知バイアス)、second-guess (後から疑う)、social architecture (社会的設計)、track record (実績)、proxy (代理指標)、market failure (市場の失敗)

→ これらは(A) 商学部受験生の必修語。単語帳に載っていないものも多いので、本文中の用例で覚える。

【コツ 4】 誤答パターン 4 種 (商学版)

- ・ (A) 言い過ぎ: all platforms / solely / immediately / completely / lost all — 商学エッセイは条件付き結論が多いので断定は罠 (例: 本問 Q6①, Q5①)
- ・ (B) 政府連想: regulation / government / forbid — 商学エッセイは市場メカニズムの話で、政府規制は通常言及されない (例: 本問 Q3③, Q6③)
- ・ (C) 論点ずれ: shipping / advertising / monitor / boycott — 本文と無関係な商業概念 (例: 本

問 Q1①③④)

- ・ (D) 逆方向: 著者の主張と反対 (例: 本問 Q3①, Q4①③)

【コツ 5】 時間配分の鉄則 (商学部 90 分)

- ・ 大問 I (語彙・文法): 15 分
- ・ 大問 II (短文読解・データ問題): 20 分
- ・ 大問 III (本問の長文): (A) 25-30 分 ← 最大配点ブロック
- ・ 大問 IV (会話文・整序): 15 分
- ・ 大問 V (自由英作 or 要約): 15 分
- ・ 見直し: 5 分

【英語が得意な人だからこそ — 最後にひとこと】

商学部の英語は(A) 語学試験であると同時に(B) ビジネスリテラシー試験。

「market vs regulation」「short-term profit vs long-term trust」「individual rationality vs collective outcome」など、商学の基本対立を頭に入れておけば、本文を読みながら著者の論理が予測できる。

日頃から The Economist の Business 欄、Harvard Business Review、日経ビジネスの特集を週 1 で読む習慣が、本番で 10-15 点の底上げになる。

## 第9章 (類題チャレンジ・10 分) [10 点]

本講義の手法 (4 段論法予測 + paraphrase 対応 + 商学用語推測) を応用する 5 問。

(類題 1) 本文中の "information asymmetry" の意味として最も近いものを選びなさい。

- ① 売り手と買い手の保有情報の不均衡
- ② 情報技術の地域格差
- ③ 企業間の情報共有の遅さ
- ④ 国際間の情報統制の差異

(類題 2) 本文の "a carefully arranged microphone" という比喩が示唆するものとして最も適切なものを選びなさい。

- ① 実は商業的に演出されている「群衆の声」
- ② プラットフォームの優れた音響設備
- ③ 消費者が自由に発信できる中立的な場
- ④ 公的機関が運営する苦情受付窓口

(類題 3) 本文中の "misaligned" が示唆する状態として最も適切なものを選びなさい。

- ① プラットフォームの incentive が消費者利益と整合していない状態
- ② アルゴリズムが技術的に未熟な状態
- ③ 規制当局が機能していない状態
- ④ 消費者同士の意見が対立している状態

(類題 4) 本文の "verified purchase" の制度が解決を目指す問題として最も適切なものを選びなさい。

- ① 実際に購入していない者が偽レビューを書く問題
- ② 配送遅延の問題
- ③ 返金処理の煩雑さ
- ④ 商品写真の解像度不足

(類題 5) 本文の論理構成として最も近いものを選びなさい。

- ① 市場の理想 → 現実の歪み → 構造的な原因 → 行動経済学的補強 → 制度設計の提案 → 条件付き結論
- ② 結論先出し → 根拠列挙のみ
- ③ 賛成意見の単純な列挙
- ④ 歴史的説明のみで結論なし

## 第10章 (まとめ・宿題・5 分)

今日の核心整理と早稲田商学部本番に向けた宿題

### 【本日の核心 5 か条】

- ① 商学エッセイは (A) 「理想 → 現実 → 構造 → 提案」 の 4 段論法が 8 割。第 1-2 段の時間対比で予測しながら読む。
- ② (B) Two decades later / business models depend on / Behavioral research suggests / A more promising direction の discourse marker で各段の役割を捕捉。
- ③ 商学頻出用語 (information asymmetry, incentive, misaligned, social architecture, verified purchase) は (C) 文脈推測 で意味を取る習慣を。
- ④ 修辞設問 "Why does the author mention X?" は 「(D) 直前の制度提案の例証」 として読む (本問 Q5 の verified purchase 等)。
- ⑤ 主旨設問は (A) 条件付き肯定 を選ぶ。「lost all / solely / immediately」のような断定調は商学エッセイでは罠。

### 【宿題】

- ① 本講義の Q1-Q6 を (A) 見ないで 本文だけ読み直し、自分で 6 問の設問を作成 → 自分で解いてみる (作問の迫体験で読解力が倍増)。
- ② 類題 5 問を解き直し、特に類題 5 (構成設問) について本文 6 段の各段に自分なりのひと言タイトルを書き出す。
- ③ 過去問: 早稲田大学 商学部 英語 (過去 5 年分) から長文読解 1 題を選び、本日の手法 ((B) 4 段論法予測 + 商学用語の文脈推測 + paraphrase mapping) で精読する。

【次回授業】 商学部の自由英作文 (150 words 程度) — "Should online platforms be held legally responsible for fake reviews posted by users?" の論理構成

予習: 上記設問に対して 5 分間の brainstorm を行い、賛成 3 点・反対 3 点を箇条書きで挙げてみる。

### 【最後にひとこと】

商学部の英語は (A) 語学試験 であると同時に (B) ビジネスリテラシー試験。本文の review 経済論を「ただの英文」として読むのではなく、「自分が大学で 4 年間学ぶ市場設計の予告編」として読んでください。

早稲田商の英語で 7 割を取れば、合否ラインを大きく上回れる。本問が解ける今日のあなたなら、(C) 十分に届く。
